Description

We are working on products that will touch the lives of everyone. Are you ready to join our Hitachi Insight Group and work on something that will profoundly change the way that we live in cities, run our manufacturing plants, operate and maintain motor vehicles, power our world, and generally improve every facet of day to day life?

You will get to work in a fast-paced, collaborative development environment architecting, designing, developing and testing a cutting-edge cloud solution. In order to have the broadest impact, you will engage with Development, Technology Architects, QA and Automation team members on cross-functional activities.

As an Automation Engineer you will be responsible for architecting, designing, and developing highly-efficient automated frameworks and tests. The Engineering team utilizes a highly collaborative development model that requires deep Automation involvement from start to finish of each project.

You need to have:

- Experience developing cutting-edge solutions
- A genuine passion for engineering high-quality solutions
- Advanced problem solving skills
- Ability to work seamlessly across multiple programming languages
- Excellent verbal and written communication skills
- Relevant formal education, including BSCS or MSCS
